01 GGT Platform plan

- Align on the core customer problem + target user
- Confirm the canonical workflow and decision points
- Choose a right-sized path forward based on budget and next step

- Timeline pressure (deadline?)
- Team capacity (who can support this?)
- Investment range (pilot vs platform build)

INSIDE:

– Problem + objective

– Primary users

– Platform solution & roles

– DEI roadmap

– Next steps

GGT is a trusted security hub that shows small-businesses, how secure they are, what to do next, and who can help.

GGT an advisor + educator + curated marketplace + mission-driven community hub in the cybersecurity ecosystem.

The problem

Small-business are accountable for security but don't have a simple, trusted way to see their risk, prioritize actions, and connect with the right experts, leaving them overwhelmed and exposed.

A single place where ops leaders can:

- See a clear snapshot of their security position.
- Get prioritized next steps in plain language.
- Access GGT experts and core services.
- Enroll staff in security awareness training.

Small to mid-business Ops / office manager, business operations leader.

Primary users:

Core pain:

- Overwhelmed by security, doesn't know "How secure are we?"
- Unsure where to start or who to trust.
- Time-poor, not a security expert, but responsible for risk.

Key use cases:

- Get a quick security assessment and prioritized actions.
- Understand which services (training, email security, fractional security team) they need.
- Onboard staff into Security 101 and ongoing micro-training.
- Discover vetted minorities + security experts for specific needs.

Value Promise:
GGT gives small businesses clarity and confidence about their security, what their risk is, what to do next, and when they need help, without requiring them to be security experts.

In 90 days, success looks like:

- Ops leaders can answer “How secure are we?”
- Each org has a prioritized 30/60/90-day plan they understand
- At least one high-risk gap is addressed
- They know which support level they need: self, advisor-led, or managed

Hight level canonical workflow

- Data inputs (what we can pull vs what we ask)
- Humans-in-the-loop points (where trust matters)

Start	Guided Security Assessment
↓	Risk Score + Maturity Snapshot
↓	Prioritized 30 / 60 / 90 Day Plan
↓	Decision: How much help do you need? — Self Guided — Advisor Led (ggt dedicated advisor or someone on their team) — Managed Support
↓	Ongoing Review → Renew → Adjust Support Level

THIS IS THE NORTH STAR ARCHITECTURE. WE DO NOT HAVE TO START HERE.

Multi-tenant, cross-cutting cybersecurity platform + Role based action control + A canonical workflow.

WHY IS THIS A GOOD SOLUTION

- Scales securely: One platform, many companies, strict data isolation.
- Prevents mistakes: Role-based action control limits risky actions.
- Single source of truth: One canonical workflow with clear state and audit options.
- Lower cost to build and grow: Shared platform capabilities reused across all services.
- Easy to extend: New offerings plug into the same foundation.

ROLES = Canonical swimlanes

Buyer/owner	Approve plans, Budget, Renew
Ops/office manager	Intake, Evidence, Set up, Assigns users, Task follow-up
Internal Champion	Complete training path, Execute playbooks
GGT Advisor	Assessment, Planning, Q&A, Quarterly reviews
GGT Ops	Monitoring, Incident response, Changes
External Expert	Scoped projects, Rated for quality, Complete training path

- Existing (need review)
- New (needs planning)
- Maybe (needs discussion)

OBJECTIVE: Ensure at least Y% of featured experts represent diverse backgrounds.

DEI ROADMAP - (DIVERSITY, EQUITY, AND INCLUSION):

1. Define & Commit - Clear DEI definition tied to GGT's mission

2. Measure Access Gaps - Analyze who is and is not able to access, adopt, and benefit from the platform.

3. Design for Equity - Design for equitable access through clear UX, fair pricing, and skills-based matching.

4. Build Inclusive Ecosystem - Build diverse expertise, deliver accessible learning, and continuously improve through shared insights.

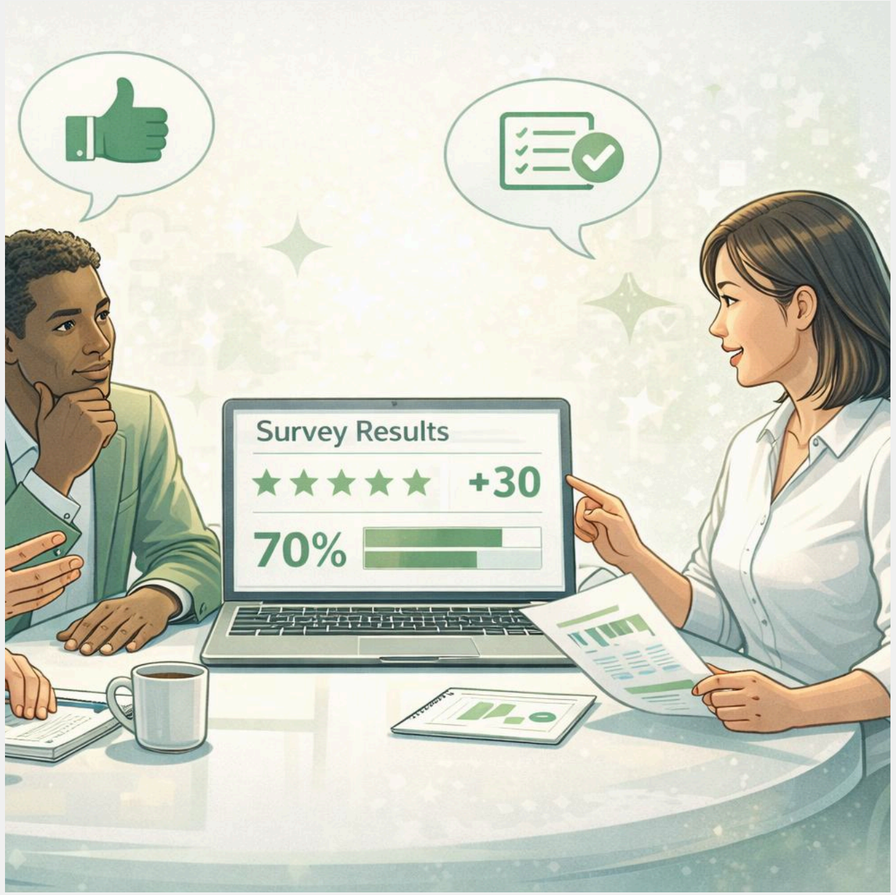
5. Share & Improve - Publish anonymized insights and review progress quarterly to improve.

How We Measure Success

1. User Value (Are we solving the problem?)
   - Clarity: ≥ 70% of ops managers say “I better understand our security.”
   - Evidence: Users complete 2–3 of their top 5 recommended actions in time*.

2. Business Value (Is it sustainable?)
   - Conversion: 20–30% of assessed organizations start/upgrade a subscription or paid consult in time*.
   - Engagement: For training clients, ≥ 60% of enrolled staff finish Security 101 in time*.

3. Mission Impact (Are we different in a meaningful way?)
   - Diverse experts: Growing number of women+ security experts in our vetted network and projects steered to them.
   - Trust: NPS (Net Promoter Score) ≥ +30% from ops managers after using the platform.



You are what you measure

Three responsible ways to move forward

OPTION A: STRATEGY + VALIDATION (LOW COST)

- Validate the workflow + value
- Define operating model + responsibilities
- Output: scoped MVP plan + go/no-go

OPTION B: THIN MVP (HUMANS-IN-LOOP) (MID COST)

- Launch assessment → plan → advisor support
- Minimal automation, maximum learning
- Output: traction + proof + real data

OPTION C: FULL PLATFORM FOUNDATION (HIGH COST)

- Multi-tenant + RBAC + automation
- Marketplace + training ecosystem
- Output: scalable product company foundation

Next Steps

1. Proof of concept. Creating a landing page for user validation including a questioner and an email sign-up + find proper spaces to popularize the research page and collect feedback

2. Map the current-state user flow to identify gaps and constraints, then design the canonical flow that establishes the intended end state.

3. Agree on an Operating Model (Who Owns What)
Product ownership - What we're building & why
Platform ownership - How it runs & how all the pieces work together
Expert network ownership - Who owns the people side of the network
Compliance / risk ownership - Who keeps us safe and legit
EDI peace ownership - who keep us focus on our mission
